

PORTABLE DOG BOWL

NEVER GET STRANDED WITHOUT FOOD OR WATER FOR YOUR DOG AGAIN!

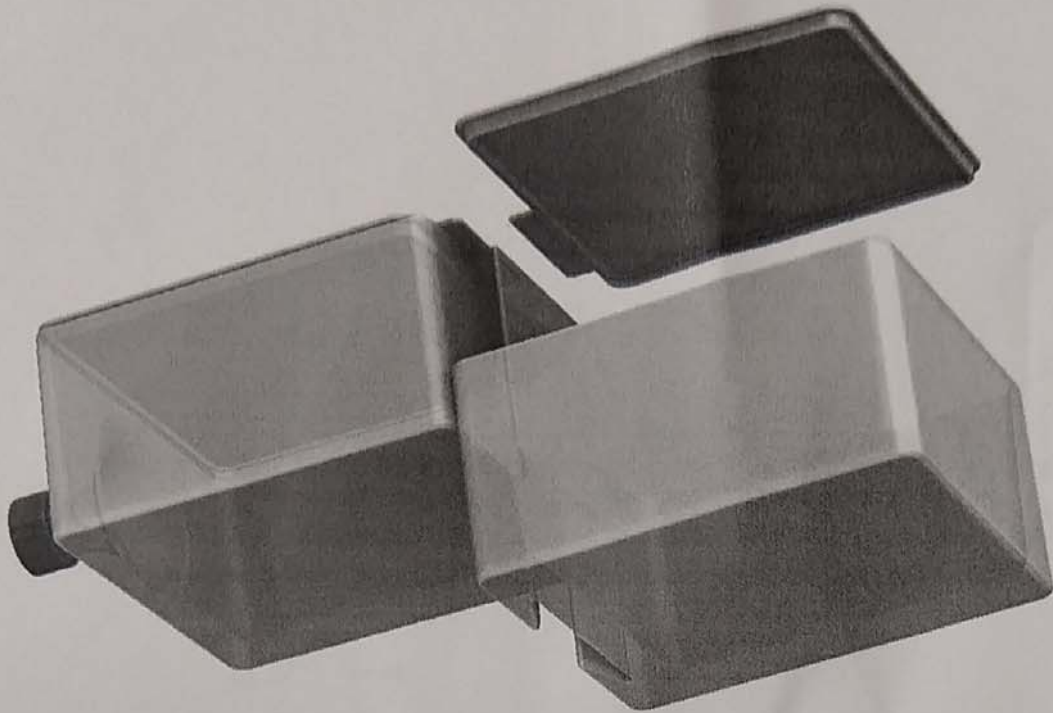

Everyone loves to bring their dog wherever they go. Now there is a perfect bowl for anyone with a dog on-the-go. The PORTABLE DOG BOWL has two compartments for food and water which eliminates any worry for the dog's well being while being away from home for a long period of time. Hiking, picnics, parties, a stay over, long walks are just a few examples.

Inventor, Albert Williams, came up with the product when he realized there was a need for dogs to have to-go packs when traveling. There are two compartments for the food and water which can also separate into two separate entities when feeding the dog. The top part for the water also has an easy to open top for water to be poured out or filled up. The PORTABLE DOG BOWL looks like any normal water bottle but with so much more functions. Albert has been granted a full utility patent for the pet bowl.

The Humane Society U.S. pet-ownership estimates for dogs:

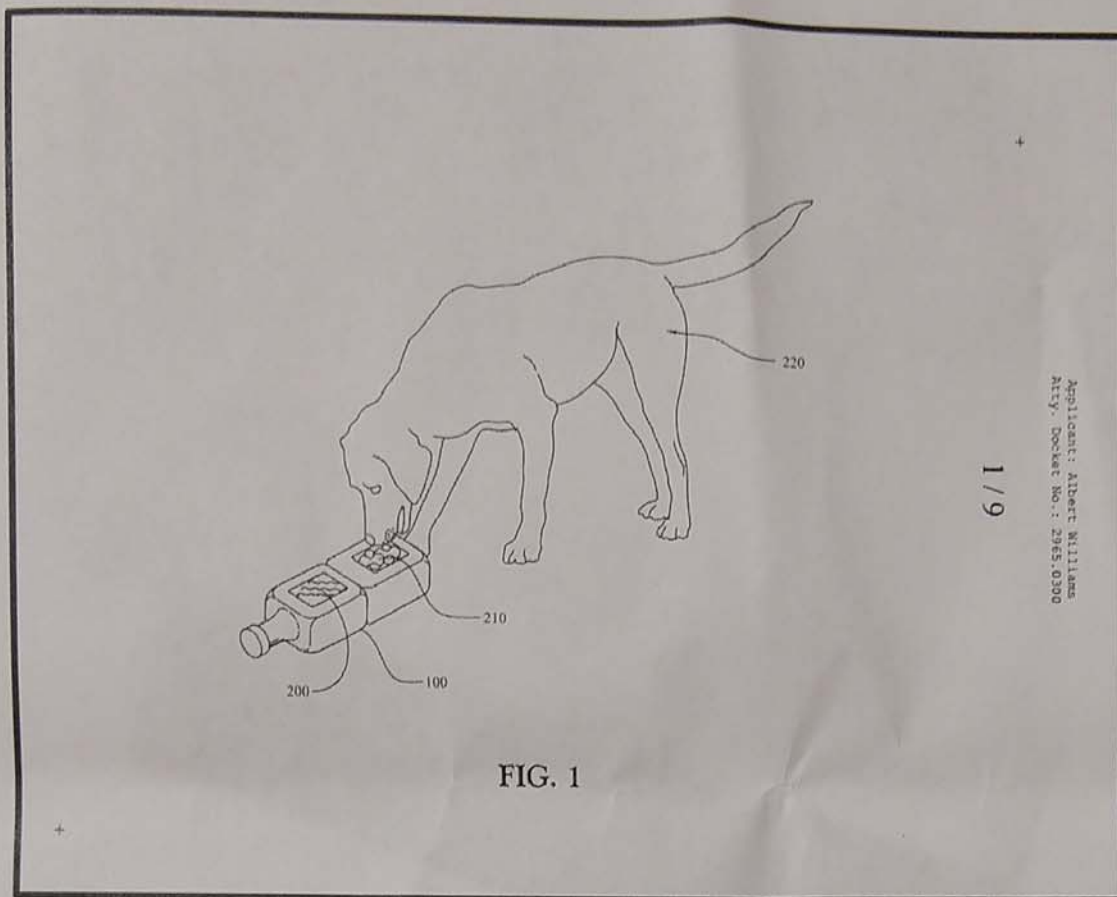

- 83.3 million—Number of owned dogs
- 47 percent—Percentage of households that own at least one dog
 - 70 percent—Percentage of owners with one dog
 - 20 percent—Percentage of owners with two dogs
 - 10 percent—Percentage of owners with three or more dogs

The Portable DOG Bowl is an entirely new concept in keeping your pet happy at home and when you are on the move. The product is a convenient, easy to carry compact system making it simple to take food and water along for your pet on those frequent 1 and 2 day trips.

The PORTABLE DOG BOWL can be easily stored and transported whenever you leave the house. There are seal tight lids for both sides which make it easy to feed your dog.

Both compartments can also be seperated which makes it easy for the dog to eat and drink. This makes it unique to any other bog bowl on the market as it has two distinct compartments for different uses and that is where the utility patent stands out.

The PORTABLE DOG BOWL is available for sale and licensing opportunities. If you would like more information, please contact Jay Burke of Invention Assistant at 1-954-254-5290.
